

VibePlan: Product Requirements Document

Product Name: VibePlan

Parent Product: VibeFoundry

Version: 1.0 (MVP)

Last Updated: January 21, 2026

Author: Focus Labs LLC

Status: Ready for Development

1. Executive Summary

VibePlan is an AI-powered conversational PRD (Product Requirements Document) generator designed for "idea guys"—solopreneurs, founders, and indie hackers who have brilliant product ideas but struggle to flesh them out into comprehensive, actionable specifications.

Problem: Founders waste time writing PRDs manually, lack frameworks to validate ideas, and often build features without fully understanding their market, monetization, or technical architecture[1].

Solution: VibePlan uses conversational AI (text + voice) to walk users through idea validation, market analysis, competitive positioning, monetization strategy, technical architecture, and complete user story mapping—resulting in a production-ready PRD that can be directly fed into AI dev agents for implementation[2].

Target Users: Idea-stage founders, indie hackers, makers, solopreneurs, startup teams

Platform: Mobile-first PWA (Responsive Next.js) + Phase 2 native apps

Launch Timeline: MVP in 8-12 weeks

Monetization: Freemium (BYOK) + \$10/month subscription + usage-based credits

2. Problem Statement

2.1 The Challenge

Building a product requires numerous interconnected decisions:

- **Market Research:** Who's the customer? What's the TAM? How crowded is the market?
- **Monetization:** Subscription? One-time? Freemium? Affiliate? What pricing tier?
- **Technical Architecture:** What tech stack? Database? Hosting? APIs? Third-party integrations?
- **Product Strategy:** MVP scope? Feature priority? User stories? Acceptance criteria?
- **Go-to-Market:** How do we acquire users? What's the launch strategy?
- **Validation:** How do we test the idea before investing months of development?

Current State: Founders either:

1. Skip documentation entirely (leads to scope creep, wasted dev time)
2. Use generic PRD templates (disconnected, lack profitability guidance)
3. Pay consultants (\$2-5K) to help them think through strategy
4. Spend 40-60 hours manually writing PRDs with incomplete analysis

Impact: Poor product decisions, wasted engineering time, failed launches, misaligned teams[3].

2.2 Why Existing Solutions Fall Short

- **PRD Templates** (Notion, Confluence): Static, generic, require user to think through everything
- **AI Chatbots** (ChatGPT, Claude): Require manual prompting, no persistence, no learning
- **Business Planning Tools** (LivePlan, Bizplan): Focused on business plans, not product specs
- **Product Management Tools** (Asana, Linear): Assume PRD already exists
- **Consulting:** Expensive, slow, not accessible to indie hackers

Gap: No tool combines conversational AI + PRD generation + idea validation + learning profile + mobile-first UX + affordable pricing[4].

3. Solution Overview

3.1 What is VibePlan?

VibePlan is a conversational AI assistant that guides users through comprehensive product planning in a natural, adaptive dialogue. Users can:

1. **Capture their raw idea** (freeform text)
2. **Have a guided conversation** with AI (text or voice)
3. **Get smart suggestions** based on market analysis, profitability, and their past projects
4. **Build a complete PRD** with all sections filled out
5. **Export to multiple formats** (markdown, Google Docs, business plan, pitch deck)
6. **Resume anytime** and edit answers retroactively

3.2 Core Value Propositions

Value Prop	Benefit
Conversational UX	Natural, flowing dialogue feels like brainstorming with a mentor, not filling out a form[5]
Voice-First	Answer questions while driving, commuting, or away from computer
Idea Validation	Built-in guidance on pre-launch validation before spending engineering time
Profitability Focus	AI suggests most profitable use of the idea, not just any viable direction
Learning Profile	System learns user's tech stack, business model preferences, audience type—future projects faster
Multiple Output Formats	Dev-ready PRD + business plan + pitch deck—one source of truth
AI Dev Agent Ready	Outputs are structured, comprehensive, and formatted for direct consumption by AI coding agents
Mobile-First	Build product plans on the go (commute, walking, driving)
Affordable	\$10/month for unlimited PRDs vs. \$2K-5K consulting

3.3 User Outcomes (Success States)

By the end of using VibePlan, users will have:

- ✓ Validated idea with target audience research
- ✓ Competitive market analysis (CMA)
- ✓ Profitability assessment and monetization strategy
- ✓ Complete tech stack decisions with justification
- ✓ System architecture diagram
- ✓ 30-100 user stories with acceptance criteria
- ✓ MVP scope definition
- ✓ Go-to-market strategy outline
- ✓ Success metrics and KPIs
- ✓ 10-15 business/app name suggestions
- ✓ Domain availability checked
- ✓ Risks identified and mitigation plans
- ✓ Phase 1, 2, 3 roadmap
- ✓ All in one markdown PRD (or Google Docs)

4. Target Audience & Market Analysis

4.1 Primary User Personas

Persona 1: The Idea Guy/Gal (60% of users)

- **Profile:** Solopreneur with great product idea, limited product management experience
- **Pain:** "I have an idea but don't know how to think through all the details"
- **Motivation:** Validate idea quickly before investing time/money
- **Tech Level:** Non-technical to moderate
- **Willingness to Pay:** Low-moderate (\$5-20/month)

Persona 2: The Indie Hacker (25% of users)

- **Profile:** Technical founder who can code but struggles with product strategy
- **Pain:** "I can build anything, but I don't know what to build or how to make money"
- **Motivation:** Build products that actually sell, not just fun side projects
- **Tech Level:** Technical
- **Willingness to Pay:** Moderate (\$10-40/month)

Persona 3: The Startup Founder (15% of users)

- **Profile:** Co-founder raising capital, needs polished PRD for pitch decks
- **Pain:** "We have a great idea but our PRD is a mess and investors want clarity"
- **Motivation:** Get validation, raise capital, align team
- **Tech Level:** Non-technical to technical (mixed team)
- **Willingness to Pay:** High (\$20-100/month)

4.2 Market Size & Opportunity

TAM (Total Addressable Market):

- Solopreneurs/freelancers globally: 1.6 billion
- Indie hackers actively building: ~500K
- Startup founders: ~2.5 million
- **Total addressable market: ~4 million people building products[6]**

SAM (Serviceable Addressable Market):

- English-speaking, willing to pay for tools: ~1 million
- Reachable via Product Hunt, Indiehackers, Twitter: ~500K

SOM (Serviceable Obtainable Market - Year 1):

- Conservative target: 5,000 paying users × \$10/month = \$600K ARR
- Aggressive target: 15,000 paying users × \$10/month = \$1.8M ARR

4.3 Competitive Landscape

Competitor	Strengths	Weaknesses	VibePlan Advantage
ChatGPT/ Claude	General-purpose AI	No persistence, no PRD focus, requires expert prompting	Specialized, conversational, learning profile
PRD Templates (Notion)	Free, structured	Generic, static, no guidance	AI-guided, adaptive, profitability-focused
ChatPRD.ai	Some AI assistance	Limited voice, no mobile UX, unclear pricing	Voice-first, mobile-optimized, clearer value
Consulting	Expert guidance	\$2K-5K cost, slow turnaround	Affordable, instant, accessible
LivePlan/ Bizplan	Business-focused	Not product-spec focused	Product spec + business plan hybrid

VibePlan Competitive Advantages:

1. Voice-first (commute-friendly)
2. Learning profile (smarter over time)
3. Profitability-guided recommendations
4. Multiple output formats (Dev + Business + Pitch)
5. Validation guidance built-in
6. Affordable pricing (\$10/month vs. \$5K consulting)
7. AI dev agent integration ready

4.4 Market Timing

Why now?

- AI models mature enough for reliable conversational guidance[7]
 - Indie hacker movement booming (Product Hunt, Twitter, communities)
 - No dominant player in "conversational PRD" space
 - Voice AI UX now viable (OpenAI Realtime, Anthropic voice)
 - Founders increasingly prefer AI tools over templates[8]
-

5. Target Audience Types & Adaptive Questioning

VibePlan adapts its questioning based on target audience. After initial idea capture, users select from:

1. **B2B SaaS** (e.g., field service management, HR, accounting)
 - Questions emphasize: Enterprise GTM, ARR potential, integration requirements
2. **B2C Mobile App** (e.g., fitness, productivity, social)
 - Questions emphasize: Unit economics, DAU/MAU, viral loops, retention
3. **Marketplace** (e.g., gig work, e-commerce, services)
 - Questions emphasize: Two-sided growth, supply/demand balance, network effects
4. **AI Agent / Automation** (e.g., custom GPT, workflow automation)
 - Questions emphasize: Model fine-tuning, data pipeline, accuracy metrics
5. **Consumer Web App** (e.g., social, news, entertainment)
 - Questions emphasize: Content strategy, engagement metrics, ad revenue potential
6. **Hardware + Software** (e.g., IoT, connected devices)
 - Questions emphasize: Supply chain, hardware costs, software-hardware synergy

Users can select multiple audience types, and AI will help them prioritize which to target first (based on profitability and market fit potential).

6. Product Features & Specifications

6.1 Core Feature: Conversational PRD Builder

Feature 1.1: Idea Capture

Description: User enters their raw product idea as freeform text.

User Story:

As a founder with a product idea,
I want to quickly capture my idea in my own words,
So that I don't have to conform to a template format.

Acceptance Criteria:

- [] User lands on home screen with call-to-action: "What's your idea?"
- [] Large text input field accepts min 50 chars, max 5000 chars
- [] Placeholder text shows example: "An app that helps contractors manage schedules and get paid faster"
- [] "Next" button is enabled after user types 50+ characters
- [] Idea is auto-saved to user's session/draft
- [] User can edit idea at any time during conversation

Conversational Prompt:

User enters: "I want to build an app that helps contractors manage their schedules"

AI responds: "Great idea! Before we dive in, I want to make sure we're thinking about this

the right way. Are you targeting B2B (selling to contractors directly), or B2C (selling to customers who need contractors)? Or both?"

Feature 1.2: Adaptive Questionnaire (Main Conversation)

Description: AI walks user through one question at a time in a conversational format. Questions adapt based on audience type and previous answers.

User Story:

As a founder,

I want to answer one question at a time in a natural conversation,

So that I'm not overwhelmed by a long form or survey.

Acceptance Criteria:

- ☐ Each question appears one at a time
- ☐ Question is clear, specific, and contextual (references previous answers)
- ☐ User can answer via text input or voice (if voice enabled)
- ☐ AI response acknowledges answer and asks follow-up or moves to next topic
- ☐ Progress bar shows % completion of questionnaire
- ☐ User can pause at any time (auto-saves)
- ☐ User can see chat history anytime (scrollable, collapsible)
- ☐ "Generate PRD" button appears after ~80% completion
- ☐ User can ask clarifying questions mid-conversation (e.g., "What do you mean by TAM?")

Sample Question Flow:

Q1: "You mentioned contractors. Are you targeting solo contractors, small teams, or large construction companies?"

[User answers: "Solo contractors and small teams"]

Q2: "Got it. How many solo contractors and small teams exist in your target geography? This helps us understand market size."

[User answers: "Maybe 50,000 in the US"]

Q3: "That's helpful. Have you validated this assumption with any actual contractors? What pain point are you solving for them specifically?"

[User answers: "They waste 2-3 hours per week managing schedules manually. Pain point is time and missed jobs"]

Q4: "Strong pain point. Are you thinking of charging contractors directly, or would this be a service you sell to contractors' customers?"

[User answers: "Charge contractors directly"]

Q5: "Makes sense. What would you charge? Monthly subscription, per-job fee, or a hybrid?"

...

Question Categories (Comprehensive List):

Phase 1: Idea Validation & Market

- What specific pain point are you solving?
- Who has this pain point? (describe ideal customer)

- How many potential customers exist? (market size estimate)
- Have you talked to any potential customers? (validation)
- What's your differentiation vs. competitors?
- Is this a new market or existing market disruption?

Phase 2: Business Model & Monetization

- Who's the paying customer? (might differ from user)
- What monetization model fits best? (subscription, one-time, freemium, etc.)
- What would you charge? (pricing tier)
- What's the gross margin potential? (cost of delivery)
- How do users discover this product? (GTM)
- What's the unit economics? (CAC, LTV, payback period)

Phase 3: Product Strategy & MVP

- What's the core feature? (must-have MVP)
- What's nice-to-have? (Phase 2+)
- How will users onboard? (activation flow)
- What metrics matter most? (retention, engagement, revenue)
- Who are your power users? (most valuable segment)
- What's the retention driver? (why do they keep using it?)

Phase 4: Technical Architecture

- Who will build this? (in-house, outsource, hybrid)
- What tech stack makes sense? (based on user profile + requirements)
- Do you need a mobile app or web suffices?
- What integrations are critical? (third-party APIs)
- What are the scaling challenges? (database, storage, compute)
- What's the security/compliance footprint? (payment, healthcare, etc.)

Phase 5: User Stories & Features

- List the top 10 features users need for MVP
- For each feature: What's the happy path? (step-by-step)
- What are edge cases? (error handling)
- What data do you need to collect?
- How do you measure feature success?

Phase 6: Competitive & Profitability Analysis

- Who are your direct competitors?
- What are they doing well? (strengths)
- What are they missing? (weaknesses)
- Why would users choose you vs. them?
- What's your profitability timeline? (months to breakeven)
- What's the highest-and-best-use of this idea for profitability?

Phase 7: Roadmap & Go-to-Market

- What's Phase 1 launch? (MVP)
- What's Phase 2? (6 months post-launch)
- What's Phase 3? (1 year post-launch)

- How will you acquire first users? (GTM channel)
 - What's your launch plan? (beta, public launch, etc.)
 - What partnerships could accelerate growth?
-

Feature 1.3: Voice Conversation

Description: Users can speak their answers instead of typing. AI speaks the question aloud and transcribes user responses.

User Story:

As a busy founder commuting to work,
I want to have a voice conversation with VibePlan,
So that I can build my PRD without hands/eyes on a screen.

Acceptance Criteria:

- ☐ Toggle button: "Text" vs. "Voice" mode (user can switch anytime)
- ☐ In voice mode: AI question is read aloud (text-to-speech)
- ☐ Microphone icon appears; user taps and speaks their answer
- ☐ Speech is transcribed in real-time (OpenAI Whisper or similar)
- ☐ Transcription appears on screen; user can edit before submitting
- ☐ User can submit transcription or re-record
- ☐ Voice mode works offline (transcription syncs when online)
- ☐ Accessibility: Can disable audio playback (show text only)

Technical Implementation:

- **Speech-to-Text:** OpenAI Whisper API or Web Speech API
 - **Text-to-Speech:** Eleven Labs, Google Cloud TTS, or native browser TTS
 - **Latency:** < 2 second response time between user speech end and AI response start
-

Feature 1.4: Answer Editing & Versioning

Description: Users can edit or delete previous answers. System optionally re-evaluates downstream recommendations.

User Story:

As a founder refining my idea,
I want to go back and change my previous answers,
So that I can update my strategy as my thinking evolves.

Acceptance Criteria:

- ☐ Chat history is visible (scrollable, in sidebar or collapsible panel)
 - ☐ Each answer is clickable to edit
 - ☐ Edit mode shows: original answer + new answer + change marker
 - ☐ User can delete entire answer (marked as "deleted" but still visible in history)
 - ☐ After edit, AI offers: "Would you like me to re-evaluate downstream decisions based on this change?"
 - ☐ If yes, AI regenerates relevant sections of PRD
 - ☐ Version history shows: "You changed this answer on [date] from [old] to [new]"
 - ☐ Users can compare PRD versions (highlight differences)
-

6.2 Feature: App Name & Domain Generator

Feature 2.1: Business/App Name Suggestions

Description: After understanding the app's purpose, AI generates 10-15 business name suggestions with domain availability check.

User Story:

As a founder,

I want AI to suggest catchy, available business names,

So that I don't waste time brainstorming and searching domain registrars.

Acceptance Criteria:

- ☐ Triggers after user answers ~5 core questions (idea clarity point)
- ☐ AI generates 10-15 name suggestions with short tagline for each
- ☐ Names are memorable, brandable, domain-friendly
- ☐ Includes variants: .com, .co, .app, .io
- ☐ Shows domain availability for each name (real-time lookup)
- ☐ Shows social handle availability (Twitter, Instagram, etc.)
- ☐ User can save favorite names to PRD
- ☐ User can regenerate names (different batch)
- ☐ User can request names in specific themes (e.g., "tech-forward," "playful," "professional")

Example Output:

Name Suggestions for Your Contractor Scheduling App:

1. **SchedulePro** | schedulepro.com (.com available) | Instagram available | Twitter available
Tagline: "Smart scheduling for contractors"
2. **TaskVault** | taskvault.io (available) | Instagram available | Twitter taken (@taskvault)
Tagline: "Where contractors' schedules stay organized"
3. **ContractSync** | contractsync.app (available) | Instagram available | Twitter available
Tagline: "Real-time coordination for contractors"

... [12 more suggestions]

Feature 2.2: Domain Checker Integration

Description: Integrated domain availability lookup for suggested names.

Acceptance Criteria:

- ☐ Checks availability in real-time (DNSimple, GoDaddy, or Namecheap API)
 - ☐ Shows if domain is available or who owns it
 - ☐ Shows price if available for purchase
 - ☐ "Buy now" link (affiliate link to domain registrar)
 - ☐ Shows social handle availability across Twitter, Instagram, LinkedIn
-

6.3 Feature: Multi-Format PRD Generation

Feature 3.1: Generate PRD

Description: User can generate PRD at any time. System creates markdown document with all sections filled based on conversation.

User Story:

As a founder,

I want to generate a complete PRD at any time,

So that I can review my product strategy and share it with my team.

Acceptance Criteria:

- ☐ "Generate PRD" button appears after ~80% questionnaire completion
- ☐ Before generating, user sees estimated credit usage + confirmation
- ☐ PRD generation shows progress bar (sections being generated)
- ☐ Each section is generated with AI (smart synthesis of answers)
- ☐ PRD includes: Executive summary, features, user stories, tech stack, roadmap, etc.
- ☐ All user stories include acceptance criteria
- ☐ PRD is formatted as clean, readable markdown
- ☐ User can edit PRD after generation (modify sections, add notes)
- ☐ PRD is saved to user's account with timestamp

PRD Structure (Auto-Generated from Conversation):

[App Name] - Product Requirements Document

1. Executive Summary

- Problem statement
- Solution overview
- Target market size
- Expected revenue potential

2. Market Analysis

- Customer personas
- Competitive landscape
- Market size (TAM/SAM/SOM)
- Differentiation

3. Product Strategy

- MVP features
- Feature roadmap (Phase 1, 2, 3)
- User personas & journeys
- Success metrics

4. Technical Architecture

- Tech stack
- System architecture diagram
- Database schema (overview)
- API design (overview)
- Hosting & deployment strategy

5. User Stories

- [30-100 detailed user stories with acceptance criteria]

6. Monetization & Go-to-Market

- Pricing strategy
- Customer acquisition strategy
- Revenue projections

7. Risks & Mitigation

- Technical risks
- Market risks
- Competitive risks

8. Appendix

- Validation checklist
- Market research summary
- Competitor analysis details

Feature 3.2: Multiple Export Formats

Description: Users can export PRD in multiple formats optimized for different audiences.

User Story:

As a founder,

I want to export my PRD in different formats for different audiences,

So that I have the right document for investors, developers, and my team.

Acceptance Criteria:

- [] Three export format options available:
 1. **Dev-Ready PRD** (Technical, for AI coding agents)
 - Emphasis: User stories, tech stack, architecture, APIs
 - Audience: Developers, AI agents
 2. **Business Plan PRD** (For investors/stakeholders)
 - Emphasis: Market, revenue, GTM, competitive advantage
 - Audience: Investors, board members, team
 3. **Pitch Deck PRD** (One-page summary)
 - Emphasis: Problem, solution, market, traction metrics
 - Audience: Pitch decks, elevator pitches

- [] Each format is downloadable as markdown
- [] Each format is exportable to Google Docs
- [] Google Docs export creates new document in user's Drive
- [] User receives shareable link to Google Doc
- [] Formatting is clean and professional (headings, bold, lists, tables)

Format Specifications:

Dev-Ready PRD (Technical Focus)

[App Name] - Developer PRD

Overview

[Problem + Solution + Key Metrics]

User Stories

- [60-100 detailed user stories with acceptance criteria]
- Grouped by feature/epic
- Each includes: Role, action, outcome + acceptance criteria

Technical Architecture

- System design diagram (ASCII or Mermaid)
- Database schema (detailed)
- API endpoints (with request/response examples)
- Third-party integrations
- Scaling considerations

Tech Stack Decisions

- Frontend: [Tech] - Why?
- Backend: [Tech] - Why?
- Database: [Tech] - Why?
- Hosting: [Tech] - Why?
- [Justification for each decision]

Implementation Roadmap

- Phase 1 (MVP): [Features]
- Phase 2: [Features]
- Phase 3: [Features]

Success Metrics

- Key metrics to track
- Acceptable thresholds

Business Plan PRD (Investor-Focused)

[App Name] - Business Plan & Product Strategy

Executive Summary

- Problem statement
- Market size
- Revenue potential
- Competitive advantage

Market Analysis

- Customer personas
- Market size (TAM/SAM/SOM)
- Competitive landscape
- Market trends

Go-to-Market Strategy

- Customer acquisition channels
- Pricing strategy
- Launch plan
- Growth projections

Financial Projections

- Revenue model
- Unit economics (CAC, LTV, payback)
- Year 1-3 projections

Risk Analysis & Mitigation

- Market risks
- Competitive risks
- Execution risks

Pitch Deck PRD (One-Pager)

[App Name] - Pitch Deck Summary

Problem

[Concise problem statement + market validation]

Solution

[Core insight + how it solves the problem]

Market Opportunity

[TAM + why now]

Competitive Advantage

[3-5 key differentiators]

Go-to-Market

[Primary acquisition channel + traction path]

Financials

[Revenue model + Year 1 revenue projection]

Ask

[What you're raising + what you'll do with it]

Team

[Why you're the right team to execute]

6.4 Feature: Google Docs Export

Feature 4.1: Export to Google Docs

Description: Users can export PRD directly to a new Google Doc in their Drive.

User Story:

As a founder,

I want to export my PRD to Google Docs,

So that I can collaborate with my team and edit in a familiar tool.

Acceptance Criteria:

- [] "Export to Google Docs" button next to download button
- [] User authenticates with Google (OAuth)
- [] System creates new Google Doc with PRD content

- ☐ Document is named: "[App Name] - PRD - [Timestamp]"
- ☐ Document is created in user's Google Drive
- ☐ Formatting is preserved: headings, bold, lists, tables
- ☐ System returns shareable link
- ☐ User gets notification: "PRD exported to Google Docs: [link]"
- ☐ User can re-export (creates new version, not overwrite)

Technical Implementation:

- **Google Docs API** (v1)
 - **OAuth 2.0** for authentication
 - **Markdown to Google Docs conversion** (custom or library like gdocs-md)
 - **Batch update** for formatting
-

6.5 Feature: Validation Guidance

Feature 5.1: Pre-Launch Validation Checklist

Description: During conversation, AI suggests validation milestones and tactics. Post-PRD, generates validation checklist.

User Story:

As a founder,

I want guidance on how to validate my idea before building,
So that I don't waste time building something nobody wants.

Acceptance Criteria:

- ☐ During conversation, AI mentions validation: "Before we go further, have you talked to any potential customers?"
- ☐ After PRD generation, separate "Validation Checklist" section appears
- ☐ Checklist includes:
 - ☐ Talk to 10-20 potential customers (template questions)
 - ☐ Create landing page + drive 100 signups (template)
 - ☐ Run paid ads test (\$100-500 budget test)
 - ☐ Calculate pre-launch metrics (conversion rate, CAC estimate)
 - ☐ Iterate based on feedback
- ☐ Each item includes:
 - Specific tactic
 - Expected outcome
 - Success metric
 - Resources (templates, guides, tools)

Example Validation Checklist Output:

Validation Checklist for [App Name]

Phase 1: Customer Discovery (2-4 weeks)

- ☐ Interview 15 potential contractors about scheduling pain
 - Tactic: Cold email + calls (template provided)
 - Success metric: 10+ interviews completed
 - Expected output: Understand core pain points, willingness to pay
- ☐ Research competing solutions (3+ competitors)
 - Tactic: Use + review, analyze pricing/features
 - Success metric: Documented competitive analysis
 - Expected output: Clear differentiation opportunities

Phase 2: Market Validation (4-6 weeks)

- ☐ Create landing page describing the solution
 - Tactic: Use Webflow/Framer (template provided)
 - Success metric: Drive 500+ visits, 50+ signups
 - Expected output: Quantified interest, email list
- ☐ Run \$100-500 ad test
 - Tactic: Google Ads + Facebook Ads (budget allocation)
 - Success metric: CAC < \$10, conversion rate > 2%
 - Expected output: Validate demand and payback math

Phase 3: MVP Validation (6-12 weeks)

- ☐ Build MVP (1-2 month sprint)
- ☐ Get 10-20 beta users
- ☐ Measure activation + retention
- ☐ Iterate based on feedback

6.6 Feature: User Learning Profile

Feature 6.1: Learn User Preferences

Description: System learns user's tech preferences, business model preferences, and audience preferences across all projects.

User Story:

As a returning founder,

I want VibePlan to remember my preferences from past projects,

So that future PRDs are faster and suggestions are smarter.

Acceptance Criteria:

- ☐ System tracks across all user projects:
 - ☐ Preferred tech stacks (Frontend, Backend, Database, Hosting)
 - ☐ Preferred business models (subscription, freemium, one-time)
 - ☐ Preferred audiences (B2B, B2C, Marketplace, etc.)
 - ☐ Preferred monetization models (per-seat, usage-based, fixed price)
 - ☐ Speed vs. completeness preference (MVP-first vs. feature-rich)
- ☐ On new project, AI suggests defaults: "Based on your past projects, you usually use Next.js + Supabase + Stripe. Should I recommend those again?"

- [] User can confirm, skip, or modify suggestions
 - [] System transparency: "Here's why I'm recommending X tech stack..."
 - [] Users can view/edit their preference profile (settings page)
-

6.7 Feature: Chat History & Persistence

Feature 7.1: Save & Resume Conversations

Description: Users can pause at any point and resume later. Full chat history is preserved.

User Story:

As a busy founder,
I want to pause my PRD conversation mid-way,
So that I can finish it later without losing my progress.

Acceptance Criteria:

- [] All conversations auto-save to database every 10 seconds
 - [] "Save & Exit" button available anytime
 - [] When user returns, they see list of drafts (name, % complete, last edited)
 - [] Clicking a draft resumes exactly where they left off
 - [] Full chat history is visible (scrollable)
 - [] Editing an old answer doesn't lose new answers below it
 - [] If 30 days of inactivity, draft is archived (can restore)
-

6.8 Feature: Confidence Scores & Transparency

Feature 8.1: AI Confidence Indicators

Description: AI indicates confidence level on recommendations (profitability projections, tech stack, pricing, etc.).

User Story:

As a founder,
I want to know when AI is confident vs. uncertain,
So that I can dig deeper on uncertain areas.

Acceptance Criteria:

- [] Key recommendations show confidence: "High confidence" / "Medium" / "Low"
- [] Reasoning shown: "I'm confident on pricing because you have validated customer interest"
- [] Low confidence triggers action: "Let's dig deeper: Have you talked to 10+ customers about price sensitivity?"
- [] Confidence is visible in final PRD

Example:

Recommended Pricing Model: Monthly Subscription at \$99/month
Confidence: MEDIUM △

Why? You've validated customer pain point but haven't yet tested price sensitivity.

Recommendation: Run a pricing survey with 20+ potential customers before launch

7. User Flows & Wireframes

7.3 Flow 3: Returning User - New Idea (Smart Defaults)

Login → Click "New PRD"

↓

"What's Your Idea?"

↓

AI Suggests: "Based on your past projects, you usually target [B2B], use [Next.js], and prefer [subscription pricing]. Should I guide you in that direction?"

↓

User: "Yes, but this time it's B2C"

↓

AI Adapts: "Got it. B2C changes the GTM strategy. Let's focus on viral loops and organic growth..."

↓

(Conversation continues with smart defaults for tech stack, but flexible on audience)

8. Technical Architecture

8.1 Tech Stack Decision

Layer	Technology	Why
Frontend	Next.js 14+ (React)	SSR, API routes, Vercel deployment, familiar to user, responsive PWA
Mobile	PWA (responsive Next.js)	Works on all devices, no app store friction, Phase 2: React Native
Backend API	Next.js API Routes	Built into framework, serverless, scales automatically
Database	Supabase (PostgreSQL)	Real-time, auth included, familiar to user, scales well
Real-time Chat	WebSockets (Socket.io or native)	Streaming chat responses, conversational feel
Auth	Supabase Auth (JWT)	OAuth built-in, secure, no extra service needed
AI Integration	OpenRouter SDK	Supports Claude, GPT, Gemini; token counting; cost tracking
Speech-to-Text	OpenAI Whisper API	Accurate, affordable, widely supported
Text-to-Speech	Eleven Labs or native	Natural sounding, low latency
File Export	Google Docs API v1	Direct integration, shareable links
Payment	Lemon Squeezy	Subscription + usage-based credits, familiar to user
Hosting	Vercel (frontend) + Supabase Cloud (backend)	Serverless, scales, reliable, fast
Storage	Supabase Storage (for exports)	Integrated with Supabase, versioning

Layer	Technology	Why
Analytics	PostHog or Plausible	Privacy-focused, founder-friendly

8.2 System Architecture

Tables:		Features:	
- users		- JWT auth	
- projects		- Row-level security (RLS)	
- chat_messages		- Real-time subscriptions	
- prd_versions		- Full-text search	
- subscriptions		- PostgreSQL (ACID, scaling)	
- credits		- Backups (automatic)	
- user_profiles		- Storage bucket (exports)	

8.3 Database Schema (Core Tables)

-- Users Table

```
CREATE TABLE users (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  email TEXT UNIQUE NOT NULL,
  auth_id TEXT UNIQUE, -- Supabase Auth ID
  created_at TIMESTAMP DEFAULT NOW(),
  updated_at TIMESTAMP DEFAULT NOW(),
  subscription_tier TEXT, -- 'free' or 'paid'
  credit_balance INT DEFAULT 0,
```

-- Learning Profile

```
preferred_tech_stack JSONB, -- { frontend: "Next.js", backend: "Node.js", ... }
preferred_audiences TEXT[], -- ['B2B SaaS', 'Marketplace']
preferred_business_models TEXT[], -- ['subscription', 'freemium']
preferred_monetization TEXT -- 'per-seat', 'usage-based', etc.
);
```

-- Projects Table (PRD Projects)

```
CREATE TABLE projects (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  user_id UUID NOT NULL REFERENCES users(id),
  name TEXT, -- Auto-generated or user-specified
  idea_description TEXT, -- Original freeform idea
  target_audiences TEXT[], -- Selected audiences
  completion_percent INT DEFAULT 0,
  status TEXT DEFAULT 'draft', -- 'draft', 'completed'
  created_at TIMESTAMP DEFAULT NOW(),
  updated_at TIMESTAMP DEFAULT NOW(),
```

-- Credit tracking

```
total_tokens_used INT DEFAULT 0,
```

```
total_credits_spent INT DEFAULT 0
);
```

-- Chat Messages Table

```
CREATE TABLE chat_messages (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  project_id UUID NOT NULL REFERENCES projects(id) ON DELETE CASCADE,
  turn_number INT, -- 1, 2, 3, ...
  user_message TEXT NOT NULL,
  ai_response TEXT NOT NULL,
  model_used TEXT, -- 'Claude Opus', 'Claude Haiku', 'GPT-4o mini', etc.
  tokens_input INT,
  tokens_output INT,
  created_at TIMESTAMP DEFAULT NOW(),
```

-- For editing tracking

```
original_answer TEXT,
edited_at TIMESTAMP,
question_topic TEXT -- 'market-validation', 'tech-stack', etc.
);
```

-- PRD Versions Table

```
CREATE TABLE prd_versions (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  project_id UUID NOT NULL REFERENCES projects(id) ON DELETE CASCADE,
  version_number INT, -- 1, 2, 3, ...
  prd_content TEXT, -- Full markdown PRD
  export_format TEXT, -- 'dev-ready', 'business-plan', 'pitch-deck'
  created_at TIMESTAMP DEFAULT NOW(),
  tokens_used INT, -- Tokens to generate this version
```

```
UNIQUE(project_id, version_number)
);
```

-- Subscriptions Table

```
CREATE TABLE subscriptions (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  user_id UUID NOT NULL REFERENCES users(id),
  lemon_squeezy_subscription_id TEXT UNIQUE,
  tier TEXT, -- 'free', 'paid'
  status TEXT, -- 'active', 'paused', 'cancelled'
  current_period_start DATE,
  current_period_end DATE,
  created_at TIMESTAMP DEFAULT NOW(),
  cancelled_at TIMESTAMP
);
```

-- Credits Table

```
CREATE TABLE credits (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  user_id UUID NOT NULL REFERENCES users(id),
  credit_amount INT,
```

```
transaction_type TEXT, -- 'purchase', 'free-grant', 'monthly-grant'
lemon_squeezy_order_id TEXT,
created_at TIMESTAMP DEFAULT NOW(),
expires_at TIMESTAMP -- Optional: credits expire after X months
);
```

8.4 API Endpoints (RESTful)

Authentication

- POST /api/auth/signup - Sign up with email
- POST /api/auth/login - Login
- POST /api/auth/logout - Logout
- GET /api/auth/me - Get current user
- POST /api/auth/refresh - Refresh JWT token

Projects

- GET /api/projects - List user's PRD projects
- POST /api/projects - Create new PRD project
- GET /api/projects/:id - Get project details
- PATCH /api/projects/:id - Update project metadata
- DELETE /api/projects/:id - Delete project

Chat / Conversation

- POST /api/projects/:id/messages - Send user message, get AI response (WebSocket preferred)
- GET /api/projects/:id/messages - Get chat history
- PATCH /api/projects/:id/messages/:messageId - Edit previous answer
- DELETE /api/projects/:id/messages/:messageId - Delete answer

PRD Generation & Export

- POST /api/projects/:id/generate-prd - Generate PRD (returns PRD markdown)
- POST /api/projects/:id/export-google-docs - Export to Google Docs (returns shareable link)
- GET /api/projects/:id/prd-versions - Get version history
- GET /api/projects/:id/prd-versions/:versionId - Get specific version

Credits & Subscription

- GET /api/user/credits - Get credit balance
- POST /api/subscription/checkout - Create Lemon Squeezy checkout
- GET /api/subscription/status - Get subscription status
- POST /api/subscription/cancel - Cancel subscription

User Profile

- GET /api/user/profile - Get user learning profile
- PATCH /api/user/profile - Update preferences
- GET /api/user/projects-analytics - Stats on past projects (for learning)

Speech

- POST /api/speech/transcribe - Transcribe audio (Whisper)
 - POST /api/speech/synthesize - Generate speech from text (TTS)
-

9. Monetization Strategy

9.1 Pricing Model

Free Tier (BYOK)

- 1 free PRD/month with VibePlan's keys (limited to Claude Sonnet)
- 3 PRDs/month with user's own API keys (Bring Your Own Key)
- Full feature access (voice, chat history, editing, exports)
- Includes guidance: "How to get free API keys"
- All app name/domain suggestions included

Paid Tier (\$10/month)

- \$10/month subscription (recurring)
- 5 PRDs/month worth of credits (~\$1.60 AI cost value)
- Can buy additional credits: \$5 for 10 PRD units (\$0.50/PRD equivalent = 50% margin)
- Model selection: User picks any model (Opus, GPT-4, etc.)
- Auto mode: Smart model switching based on conversation complexity
- Priority support
- Can pause/resume subscription anytime

Credit System (Usage-Based)

AI Cost Analysis (Jan 2026 pricing):

- Initial Assessment (Opus): ~0.35 credits
- Detail Brainstorming (Haiku/Gemini): ~0.08 credits
- PRD Generation (Haiku): ~0.06 credits
- Total per PRD (smart switching): ~0.50 credits

\$10/month tier includes: 5 credits = 5 PRDs

Additional credits: \$5 for 10 credits

Profit margin: \$0.50 cost + \$0.50 margin = \$1.00 revenue per PRD

Free users with BYOK:

- No charge from VibePlan
- User pays OpenAI/Anthropic directly for API usage
- Guidance provided: "Get \$5 free OpenAI credits here" (affiliate link)

9.2 Revenue Projections (Conservative)

Year 1 Targets:

- Month 3: 500 paid users × \$10 = \$5,000/month
- Month 6: 2,000 paid users × \$10 = \$20,000/month
- Month 12: 5,000 paid users × \$10 = \$50,000/month
- **Year 1 ARR: ~\$300,000**

Assumptions:

- 40% of users convert from free to paid (industry standard: 2-5%, we're higher due to strong value prop)
- Average paid user retention: 80% MoM
- Additional credit purchases: +20% revenue on top (users upgrading mid-month)

9.3 Partner Affiliate Revenue (Phase 1.5)

Referral Partners (Earn commissions):

1. **Doola** (Business registration)
 - Commission: 30% of first purchase
 - Expected: 5% of users sign up = 250 users × \$50 avg = \$12,500
 - Commission earned: \$3,750/year
2. **Mercury** (Business banking)
 - Commission: \$50-200 per signup
 - Expected: 3% of users = 150 users × \$100 = \$15,000
3. **Stripe** (Payments)
 - Commission: 0.5% of processed volume (if they use Stripe)
 - Expected: 2% of user volume = \$5,000
4. **Vercel** (Hosting)
 - Commission: 30% lifetime
 - Expected: 1% of users = \$2,000

Year 1 affiliate revenue projection: ~\$25,000-30,000 (secondary revenue stream)

10. Go-to-Market Strategy

10.1 Target Channels

Phase 1: Product Hunt + Dev Communities

- Launch on Product Hunt (week 1-2)
- Post on Indie Hackers, Twitter, Reddit (/r/SideProject)
- Target: 500+ upvotes, 300+ new users

Phase 2: Content Marketing

- Blog posts: "How to write a PRD in 30 minutes," "Idea validation checklist," etc.
- Video tutorials: How to use VibePlan (YouTube)
- Guest posts on Medium, [Dev.to](#)

Phase 3: Partnerships

- Partner with VibeFoundry community (built-in audience)
- Affiliate partnerships (Doola, Mercury, Vercel, etc.)
- Sponsorships: Indie Hackers, Maker communities

Phase 4: Paid Acquisition

- Targeted Google Ads: "PRD generator," "product requirements template"
- Twitter/X ads: Target indie hackers + founders

- Sponsored content on [Dev.to](#)

10.2 Launch Plan

Pre-Launch (2 weeks before)

- Beta invite to 50 selected users (co-founders, advisors, community)
- Gather testimonials & refine based on feedback
- Create demo video
- Write Product Hunt launch post

Launch Day

- Launch on Product Hunt
- Tweet thread sharing behind-the-scenes
- Email to VibeFoundry community
- Target: Top 5 on PH, 300+ upvotes

Post-Launch (Week 1-4)

- Respond to all feedback / bugs
- Release fixes based on feedback
- Email users who sign up → guide them to first PRD
- Collect case studies

10.3 Acquisition Funnel Targets (Year 1)

Product Hunt + Social: 2,000 signups

↓ (5% conversion to paid)

Paid users: 100 (Month 1)

Content Marketing + SEO: 1,000 signups/month (Month 2-12)

↓ (5% conversion)

Paid users: +50/month average

Partnerships + Affiliates: 2,000 signups/year

↓ (8% conversion)

Paid users: +160/year

Year 1 Total Paid Users: ~5,000

Year 1 ARR: \$600K (including credits + affiliate)

11. Success Metrics & KPIs

11.1 Product Metrics

Metric	Month 3	Month 6	Month 12
Signups	500	2,000	10,000
Free → Paid Conversion	5%	8%	10%
Paid Users	25	160	1,000
MoM Retention	70%	75%	80%
Average PRDs/user/month	2	2.5	3
Free user activation	20% complete PRD	30%	40%

11.2 Business Metrics

Metric	Month 3	Month 6	Month 12
MRR	\$250	\$1,600	\$50,000
ARR	\$3,000	\$19,200	\$600,000
CAC	\$50	\$40	\$30
LTV	\$500	\$800	\$1,200
LTV:CAC Ratio	10:1	20:1	40:1
Churn Rate	30%	25%	20%

11.3 User Experience Metrics

Metric	Target
Conversation Completion Rate	60%+ (% of users who finish PRD)
Time to First PRD	45 minutes average
Export Success Rate	95%+
Voice Mode Adoption	40%+ of users try voice
Google Docs Export Rate	30%+ of PRDs exported to Docs
App Name Suggestion Rating	4.5/5 stars (user feedback)

12. Roadmap & Phasing

12.1 MVP (Phase 1) - Weeks 1-12

What ships:

- ✓ Conversational AI PRD builder (text + voice)
- ✓ Free/Paid tiers with credit system
- ✓ Multiple PRD formats (Dev-Ready, Business Plan, Pitch Deck)
- ✓ Google Docs export + Markdown download
- ✓ Validation guidance
- ✓ User learning profile
- ✓ App name + domain generator
- ✓ Chat history & answer editing
- ✓ Version history
- ✓ Progress bar

Tech:

- Next.js + Supabase + OpenRouter
- WebSocket chat
- Google Docs API
- Lemon Squeezy billing

Team:

- 2-3 engineers (1 frontend, 1 backend, 1 AI/integrations)
- 1 PM/Product
- 1 Designer (UI/UX)

Launch:

- Private beta: Week 8
- Public launch: Week 12 (Product Hunt)

12.2 Phase 1.5 (Weeks 13-16) - Quick Wins

What ships:

- ✓ Partner referral links (Doola, Mercury, Vercel, Supabase)
- ✓ Social handle availability checker
- ✓ Advanced analytics dashboard (for users)
- ✓ Team collaboration features (comments on PRD)
- ✓ Custom branding for exports (user's logo/colors)

Effort: 2 engineers, 2 weeks

12.3 Phase 2 (Months 4-6)

What ships:

- ✓ Native iOS app (React Native)
- ✓ Native Android app
- ✓ Full infrastructure integration (auto-create Mercury accounts from app)
- ✓ Advanced validation tools (landing page generator, survey templates)
- ✓ Lean Canvas output format
- ✓ Integrations with GitHub, Jira, Linear (export user stories)
- ✓ Team workspaces (multiple team members on same PRD)
- ✓ Advanced search / filtering (find PRDs by audience, tech stack, etc.)
- ✓ PRD marketplace (share templates, find inspiration)

Effort: 4 engineers, 12 weeks

12.4 Phase 3 (Months 7-12)

What ships:

- ✓ AI agent integration (auto-execute PRDs)
 - ✓ Custom AI fine-tuning (users teach AI their company's patterns)
 - ✓ Multi-language support
 - ✓ Advanced compliance features (GDPR, data residency)
 - ✓ Enterprise features (SSO, audit logs, SLAs)
 - ✓ PRD quality scoring (how good is your PRD?)
 - ✓ Investor-ready pitch deck generator
 - ✓ Market research integration (real-time competitor data)
-

13. Risks & Mitigation

13.1 Technical Risks

Risk	Probability	Impact	Mitigation
Voice transcription errors	Medium	Medium	Test Whisper extensively, allow user edits, fallback to text
AI hallucinations in PRD	Medium	High	Add confidence scores, require user review, manual editing
Latency in conversational flow	Medium	Medium	Optimize prompt size, use Sonnet/Haiku for detail questions, streaming responses
Google Docs API rate limits	Low	Low	Implement request queuing, caching, error retries
Supabase scaling issues	Low	High	Use read replicas, caching layer (Redis), monitoring

13.2 Product Risks

Risk	Probability	Impact	Mitigation
Users don't complete PRD	High	High	Simplify flow, show progress, email reminders, exit surveys
PRD quality is poor	Medium	High	Build confidence scores, add AI quality checks, user review prompts
Low conversion to paid	Medium	High	Freemium strategy, strong value prop, targeted onboarding
Users churn early	Medium	Medium	Onboarding tutorial, success emails, in-app support, low friction pause/resume

13.3 Market Risks

Risk	Probability	Impact	Mitigation
Competitors launch similar product	High	Medium	Build brand loyalty, community, integrations, moat (learning profile)
AI market changes rapidly	Medium	Medium	Use OpenRouter (multi-model), stay agnostic, don't over-index on one provider
Users prefer manual PRD writing	Low	Medium	Build on value prop (voice, mobile, validation), gather feedback
Indie hacker market saturates	Low	Medium	Expand to startups, agencies, enterprises (Phase 2+)

13.4 Business Risks

Risk	Probability	Impact	Mitigation
Unit economics don't work	Low	High	Monitor LTV:CAC ratio, optimize CAC, test pricing tiers
Churn higher than expected	Medium	Medium	Focus on retention, success metrics, community building
AI API costs spike	Medium	Medium	Model diversification, usage optimization, dynamic pricing
Payment processor issues	Low	High	Use Lemon Squeezy (handles complexities), backup processor

14. User Stories & Acceptance Criteria

14.1 Epic 1: Idea Capture & Assessment

Story 1.1: User inputs freeform idea

As a founder with a product idea,
I want to describe my idea in my own words,
So that I don't have to conform to a rigid form.

Acceptance Criteria:

- ☐ Landing page has large text area with placeholder
- ☐ Minimum 50 chars, maximum 5000 chars
- ☐ "Next" button enabled after 50+ chars
- ☐ Idea auto-saves on blur
- ☐ User can edit idea anytime during conversation
- ☐ On mobile, textarea is full-width and touch-friendly

Story 1.2: AI analyzes idea and suggests audience types

As a user who isn't sure about my target audience,
I want AI to analyze my idea and suggest target audiences,
So that I can pick the most profitable direction.

Acceptance Criteria:

- ☐ After idea input, AI responds with 2-3 audience suggestions
- ☐ Suggestions include reasoning (why each fits)
- ☐ User can select multiple audiences
- ☐ Suggestions based on idea keywords + market knowledge
- ☐ User can also select custom audience (free text)
- ☐ AI offers guidance: "Based on market size, [Audience] is highest revenue potential"

Story 1.3: User selects primary + secondary audiences

As a founder,
I want to select which audience types to focus on,
So that the conversation adapts to my target market.

Acceptance Criteria:

- ☐ UI shows 6 audience type options (B2B SaaS, B2C, Marketplace, AI Agent, etc.)
- ☐ User can select multiple
- ☐ Selection is required before moving forward
- ☐ AI asks: "Which is primary? The others are secondary pivots."
- ☐ User selects primary
- ☐ AI confirms: "Great. We'll focus on [Primary] first. We can explore [Secondary] pivots later."

Story 1.4: AI provides profitability guidance

As a founder,
I want AI to tell me which audience option is most profitable,
So that I prioritize my efforts.

Acceptance Criteria:

- ☐ After audience selection, AI provides analysis:
 - ☐ Market size (TAM/SAM)
 - ☐ Average company profitability in that market
 - ☐ Typical pricing for solutions in that market
 - ☐ Time-to-revenue estimates
 - ☐ AI highlights: "From a profitability standpoint, [Audience] has strongest potential because..."
 - ☐ User can override if they prefer a different audience
 - ☐ Analysis is saved to PRD
-

14.2 Epic 2: Conversational PRD Building

Story 2.1: User receives one question at a time

As a founder,

I want to answer one question at a time,

So that I'm not overwhelmed by a long form.

Acceptance Criteria:

- ☐ After audience selection, AI asks first question
- ☐ Questions appear in chat-like format
- ☐ One question visible at a time
- ☐ Question is clear and contextual
- ☐ User can scroll up to see previous Q&A
- ☐ Text input field ready for answer
- ☐ Placeholder text suggests answer format (e.g., "describe their main pain point")

Story 2.2: User answers via text or voice

As a founder on a commute,

I want to answer VibePlan questions using my voice,

So that I can build my PRD without using my hands.

Acceptance Criteria:

- ☐ Toggle button: "Text" vs. "Voice" mode
- ☐ In voice mode, AI question is read aloud (TTS)
- ☐ Microphone button appears for recording
- ☐ User taps and speaks answer
- ☐ Speech is transcribed in real-time (Whisper)
- ☐ Transcription appears on screen
- ☐ User can edit transcription before submitting
- ☐ Voice works on mobile (iOS/Android)
- ☐ Offline mode: Records audio locally, syncs when online

Story 2.3: AI remembers previous answers and references them

As a founder,

I want AI to remember my previous answers,

So that the conversation flows naturally without repeating context.

Acceptance Criteria:

- ☐ AI reads full chat history before responding

- ☐ Responses reference previous answers (e.g., "You mentioned 50K contractors...")
- ☐ AI avoids asking duplicate questions
- ☐ AI connects dots (e.g., "If contractors are your customer and you're charging \$99/month, that's \$5.9M ARR potential")
- ☐ Chat history is visible in sidebar (collapsible)

Story 2.4: User pauses and resumes later

As a busy founder,

I want to pause mid-conversation and finish later,

So that I can build my PRD over multiple sessions.

Acceptance Criteria:

- ☐ "Save & Exit" button appears anytime
- ☐ User clicks, draft is saved with progress
- ☐ On return, user sees "Resume [Project Name]" option
- ☐ Clicking resumes at exact turn they left off
- ☐ Chat history is fully preserved
- ☐ Progress bar shows where they left off
- ☐ No data loss on session timeout

Story 2.5: Chat history is saved and visible

As a user,

I want to see my full chat history anytime,

So that I can review what we discussed.

Acceptance Criteria:

- ☐ Chat history sidebar visible on all screens (or toggle on mobile)
- ☐ Scrollable, shows all messages chronologically
- ☐ Each message shows: turn number, timestamp, user input, AI response
- ☐ Ability to search chat ("find all mentions of pricing")
- ☐ Ability to export chat as text file

14.3 Epic 3: Answer Management

Story 3.1: User edits previous answers

As a founder refining my strategy,

I want to go back and edit previous answers,

So that I can update my thinking without restarting.

Acceptance Criteria:

- ☐ Each answer in chat is clickable/editable
- ☐ Click to edit, shows: [Original Answer] → [Edit Box] → [New Answer]
- ☐ Change is marked with timestamp: "Edited Jan 21 at 11:45 PM"
- ☐ Original answer is still visible (version history)
- ☐ User submits new answer
- ☐ Chat updates inline

Story 3.2: User deletes answers

As a founder,

I want to delete incorrect or no-longer-relevant answers,
So that the PRD focuses on my current thinking.

Acceptance Criteria:

- ☐ Each answer has "Delete" button (trash icon)
- ☐ Confirmation: "Are you sure? This will be removed from the PRD."
- ☐ If deleted, answer marked as "[Deleted on Jan 21]" but still visible in history
- ☐ PRD regeneration excludes deleted answers

Story 3.3: AI re-evaluates downstream decisions after edits

As a founder changing an answer midway,
I want AI to re-evaluate how that change affects downstream recommendations,
So that my PRD stays coherent.

Acceptance Criteria:

- ☐ After user edits answer, AI offers: "Would you like me to re-evaluate recommendations based on this change?"
- ☐ If yes, AI regenerates affected sections
- ☐ Regenerated sections show: "Updated based on your answer change"
- ☐ If no, user can continue without re-evaluation
- ☐ Re-evaluated sections are tracked in version history

Story 3.4: Version history shows what changed

As a founder,
I want to see how my PRD evolved over time,
So that I can compare versions.

Acceptance Criteria:

- ☐ "Version History" tab in PRD view
- ☐ Shows list: "Version 1 - Jan 21, 1:00 PM", "Version 2 - Jan 21, 3:30 PM"
- ☐ Click a version to view (side-by-side comparison optional)
- ☐ Each version shows: creation time, edits made, tokens used
- ☐ Ability to restore old version (if needed)

14.4 Epic 4: PRD Generation & Export

Story 4.1: User generates PRD at any time

As a founder,
I want to generate a complete PRD from my conversation,
So that I can see the full document.

Acceptance Criteria:

- ☐ "Generate PRD" button appears after ~80% questionnaire
- ☐ Button shows: "Ready to generate? You're [X]% complete"
- ☐ Click shows: "Estimating credits needed: [Amount]"
- ☐ User confirms or cancels
- ☐ If confirmed, progress bar shows PRD generation
- ☐ Sections appear one-by-one: "Generating Executive Summary...", "Generating User Stories...", etc.

- ☐ PRD appears in modal/page when complete

Story 4.2: PRD shows estimated credits before generating

As a user,

I want to know how much this will cost,
So that I can decide if I have enough credits.

Acceptance Criteria:

- ☐ Before generation, show: "This PRD will cost approximately [X] credits"
- ☐ Show credit balance: "You have [Y] credits. [Z] will remain."
- ☐ If not enough credits, show: "You need [N] more credits. Buy here?"
- ☐ Link to buy credits (Lemon Squeezy)

Story 4.3: PRD is generated as markdown

As a developer,

I want the PRD as clean markdown,
So that I can parse it programmatically.

Acceptance Criteria:

- ☐ PRD uses standard markdown syntax
- ☐ Headings use #, ##, ###
- ☐ Lists are properly formatted (- or *)
- ☐ Tables use markdown table format
- ☐ Code blocks use ``
- ☐ No HTML or other formatting
- ☐ Downloadable as .md file

Story 4.4: User exports to Google Docs with formatting

As a user collaborating with my team,
I want to export my PRD to Google Docs,
So that we can work together.

Acceptance Criteria:

- ☐ "Export to Google Docs" button in PRD view
- ☐ User clicks, Google OAuth prompt
- ☐ User authenticates
- ☐ New Google Doc created in their Drive
- ☐ Doc name: "[App Name] - PRD - [Date]"
- ☐ Formatting preserved: headings, bold, lists, tables
- ☐ Shareable link returned
- ☐ User can export multiple times (creates new versions, doesn't overwrite)

Story 4.5: User downloads as markdown file

As a developer,

I want to download the PRD as a .md file,
So that I can use it in my workflow.

Acceptance Criteria:

- ☐ "Download" button next to "Export to Google Docs"
- ☐ File name: "[App Name] - [PRD.md](#)"

- ☐ Click triggers browser download
- ☐ File is valid markdown

Story 4.6: User shares PRD link (view-only)

As a founder,

I want to share my PRD with investors/team,

So that they can review it without editing.

Acceptance Criteria:

- ☐ "Share" button generates unique shareable link
 - ☐ Link format: vibeplan.com/prd/[unique-id]
 - ☐ Shared PRD is view-only (no editing)
 - ☐ No authentication required to view shared link
 - ☐ User can generate new link (revokes old)
 - ☐ User can see who accessed the link (analytics)
-

14.5 Epic 5: User Learning Profile

Story 5.1: System learns tech stack preferences

As a returning founder,

I want VibePlan to remember my tech stack from past projects,

So that it suggests the same stack for new ideas.

Acceptance Criteria:

- ☐ System tracks tech from each completed PRD
- ☐ Learns: Frontend framework, Backend, Database, Hosting, Payment processor
- ☐ On new PRD, after audience selection: "Based on [Project1], you typically use [Next.js + Supabase + Stripe]. Should I recommend that again?"
- ☐ User confirms or changes
- ☐ Profile visible in user settings

Story 5.2: System learns business model preferences

As a founder,

I want VibePlan to suggest business models I've used before,

So that I don't re-answer basic questions.

Acceptance Criteria:

- ☐ System tracks: Subscription, Freemium, One-time, Hybrid models selected
- ☐ On new PRD: "Your past projects used [Subscription] models. Starting there?"
- ☐ User confirms or changes
- ☐ Profile shows: "Preferred models: [Subscription 80%, Freemium 20%]"

Story 5.3: System learns audience preferences

As a founder building in my niche,

I want VibePlan to default to my audience type,

So that the conversation is faster.

Acceptance Criteria:

- ☐ System tracks: B2B SaaS, B2C Mobile, Marketplace, etc.

- ☐ On new PRD: "Your past [4] projects were B2B SaaS. Focus there again?"
- ☐ User confirms or explores new audience
- ☐ Profile shows: "Preferred audiences: [B2B SaaS 75%, Marketplace 25%]"

Story 5.4: System suggests defaults on future projects

As a busy founder,

I want VibePlan to suggest smart defaults,

So that I skip repetitive setup.

Acceptance Criteria:

- ☐ New PRD shows default suggestions for:
 - Tech stack
 - Business model
 - Audience type
 - Monetization approach
 - Pricing tier patterns
 - ☐ User can see why each default is suggested
 - ☐ User can override any default
 - ☐ Suggestions improve over time (more projects = smarter defaults)
-

14.6 Epic 6: Subscription & Credits

Story 6.1: User signs up for free tier (BYOK)

As a first-time user,

I want to try VibePlan for free with my own API keys,

So that I can see if it's valuable before paying.

Acceptance Criteria:

- ☐ Sign up flow asks: "Do you have API keys?" (Yes/No)
- ☐ If No: Show guide to get free keys (OpenAI, Anthropic)
- ☐ If Yes: Prompt to enter keys
- ☐ Keys stored securely (encrypted in Supabase)
- ☐ User gets 3 free PRDs/month with BYOK
- ☐ No credit card required

Story 6.2: User sees credit balance

As a user,

I want to see how many credits I have left,

So that I know when to buy more.

Acceptance Criteria:

- ☐ Credit balance visible in top-right (or sidebar)
- ☐ Shows: "Credits: 5 / 5 (free tier)" or "Credits: 12 / 10 (paid)"
- ☐ Updates real-time after PRD generation
- ☐ Click to see credit history (purchases, usage)

Story 6.3: User gets alerted if PRD will exceed credits

As a user about to run out of credits,

I want a warning before generating,

So that I don't waste credits.

Acceptance Criteria:

- ☐ Before generating PRD: "This PRD will use [X] credits. You have [Y] remaining."
- ☐ If not enough: "You don't have enough credits. Buy more?" (link to checkout)
- ☐ User can purchase credits mid-PRD (seamless)
- ☐ After purchase, PRD generation resumes

Story 6.4: User subscribes to \$10/month plan

As a heavy user,

I want a monthly subscription,

So that I get regular credits without managing purchases.

Acceptance Criteria:

- ☐ Pricing page shows: "Free (BYOK)" vs. "\$10/month (Unlimited AI)"
- ☐ Click "\$10/month" → Lemon Squeezy checkout
- ☐ User enters email, payment info
- ☐ Subscription confirmed, user sees: "Welcome to VibePlan Pro!"
- ☐ Subscription shows in dashboard ("Active since Jan 21")
- ☐ Can pause/resume anytime

Story 6.5: User buys additional credits

As a user who exceeded monthly credits,

I want to buy more credits on-demand,

So that I can continue working.

Acceptance Criteria:

- ☐ "Buy Credits" button in dashboard
- ☐ Options: "\$5 for 10 credits" (or bundles)
- ☐ Click → Lemon Squeezy checkout (same as subscription)
- ☐ One-time purchase (no recurring)
- ☐ Credits add to account immediately after payment

Story 6.6: Free users get 1 free PRD/month

As a free user,

I want 1 free PRD per month,

So that I can test VibePlan's value.

Acceptance Criteria:

- ☐ Free tier: 1 free PRD/month using VibePlan's keys (Claude Sonnet)
- ☐ After first PRD, message: "You've used your free PRD this month. Subscribe for unlimited."
- ☐ Can still create PRDs with BYOK (3 max)
- ☐ Resets on 1st of next month
- ☐ Unused free PRD doesn't roll over

Story 6.7: BYOK users get 3 PRDs/month limit

As a free BYOK user,

I want 3 free PRDs per month,

So that I can test multiple ideas.

Acceptance Criteria:

- [] Free BYOK tier: 3 PRDs/month limit
 - [] Counter shows: "PRDs used this month: 2 / 3"
 - [] After 3rd PRD, message: "You've reached your monthly limit. Upgrade for unlimited."
 - [] Resets on 1st of next month
 - [] Unused PRDs don't roll over
-

15. Appendix A: AI Prompting Strategy

15.1 System Prompt (for OpenRouter)

You are VibePlan, an expert product strategist and AI assistant helping founders build comprehensive Product Requirements Documents (PRDs).

Your core responsibilities:

1. Guide users through one-question-at-a-time conversations about their product idea
2. Ask clarifying questions to understand: market, monetization, technical architecture, user stories
3. Reference previous answers to avoid repetition and create coherent connections
4. Provide smart suggestions based on market analysis and profitability
5. Help with idea validation, name generation, competitive analysis
6. Be conversational and encouraging (not robotic)
7. Flag areas of uncertainty with confidence scores
8. Suggest defaults based on user's past projects

Conversation Style:

- Friendly, conversational tone
- Avoid jargon (explain terms clearly)
- Ask one question at a time
- Build on previous answers ("You mentioned X, tell me more about...")
- Provide context when relevant
- Summarize key insights periodically

When to Escalate:

- User seems confused: Offer simpler explanation or examples
- User wants to pivot audience: Ask clarifying questions, offer profitability comparison
- Low confidence area: Flag it ("I'm less confident here because we don't have market data. Let's dig deeper...")

Special Instructions:

- Always maintain context from full conversation history
- Connect ideas (e.g., if user said "contractors are time-poor," later suggest time-saving as core messaging)
- After ~5 questions, start checking: "Does this direction feel right, or should we pivot?"
- Celebrate wins ("Great market insight! That's a strong differentiator")

15.2 Question Sequencing Logic

Initial Phase (Questions 1-5):

- Focus: Understanding the core idea + problem statement
- Questions: What's the problem? Who has it? How big is the market?

Middle Phase (Questions 6-15):

- Focus: Business model + monetization
- Questions: Who pays? How much? What's the GTM?

Advanced Phase (Questions 16-30):

- Focus: Product strategy + technical architecture
- Questions: MVP scope? Tech stack? User stories?

Final Phase (Questions 31+):

- Focus: Validation + roadmap
- Questions: How do we validate? What's Phase 2? What are the risks?

15.3 Prompts for Specific Tasks

App Name Generation Prompt:

User has described a [Audience] product that [Core Problem].

Generate 15 creative, memorable business names that:

1. Are easy to spell and pronounce
2. Suggest the product category (without being too on-the-nose)
3. Are available as .com, .io, or .app domains
4. Work well on social media (fit Twitter handle limits)
5. Sound professional and scalable

Format each as:

Name | .com available? | Tagline

PRD Generation Prompt:

Based on this conversation, generate a complete PRD with sections:

1. Executive Summary
2. Problem Statement
3. Solution Overview
4. Target Market & Competitive Analysis
5. Product Strategy & MVP
6. User Stories (generate 40-60 detailed stories with acceptance criteria)
7. Technical Architecture (tech stack decisions + justification)
8. Monetization & Go-to-Market
9. Success Metrics & KPIs
10. Roadmap & Risks

Use the conversation history to fill each section. Include confidence scores where relevant. Output as clean markdown.

16. Appendix B: Integration APIs & Webhooks

16.1 Lemon Squeezy Integration

Webhook Events:

event: ordercompleted

- User just purchased credits
- Add credits to account
- Send "Purchase Confirmation" email

event: subscription_payment_success

- Monthly subscription payment succeeded
- Grant monthly credits
- Send "Renewal Confirmation" email

event: subscription_payment_failed

- Subscription payment failed
- Alert user; offer retry
- Reduce credit generation to 0

event: subscription_cancelled

- User cancelled subscription
- Mark as 'free' tier
- Warn before losing benefits

16.2 Google Docs API Integration

Flow:

1. User clicks "Export to Google Docs"
2. Check if user has Google OAuth token (if not, prompt auth)
3. Create document:
 - Call docs.create({ title: "[App Name] PRD" })
 - Get document ID
4. Insert content:
 - Parse markdown → Google Docs format
 - Use batchUpdate to insert text, headings, tables
5. Share document:
 - Set permissions (user can share/modify)
 - Return shareable link
6. Send confirmation email with link

16.3 OpenRouter Integration

API Call Example:

```
const response = await openrouter.chat.completions.create({
  model: "auto", // or specific model
  messages: [
    { role: "system", content: systemPrompt },
```

```
{ role: "user", content: userMessage },  
],  
temperature: 0.7,  
top_p: 0.9,  
stream: true, // For streaming responses  
});  
  
// Track tokens  
const { usage } = response;  
const cost = (usage.prompt_tokens * modelPricingMap[model].input +  
usage.completion_tokens * modelPricingMap[model].output) / 1000000;
```

17. Appendix C: Validation Framework

Pre-Launch Validation (You should complete before MVP launch):

- ☐ Interview 10+ founders about their PRD pain points
- ☐ Build landing page, drive 100+ signups
- ☐ Create demo video, test messaging
- ☐ Beta test with 20-30 selected users
- ☐ Measure: Completion rate, feedback, willingness to pay

Post-Launch Validation (Metrics to track):

- ☐ Free → Paid conversion rate
 - ☐ PRD completion rate
 - ☐ Time to first PRD
 - ☐ User retention (Week 1, Week 4, Week 12)
 - ☐ Feature adoption (voice, Google Docs export, etc.)
 - ☐ Qualitative feedback (surveys, interviews)
 - ☐ NPS score
-

18. Conclusion & Next Steps

VibePlan represents a significant opportunity in the founder tools market. By combining conversational AI, voice-first UX, mobile accessibility, and profitability-focused guidance, VibePlan fills a gap left by existing solutions.

Key Success Factors:

1. **Excellent conversational UX** - Must feel like brainstorming with a mentor
2. **Voice-first execution** - Differentiate with seamless voice QA
3. **Learning profile** - Build moat with personalized defaults
4. **Community** - Leverage VibeFoundry community for early adoption
5. **Aggressive iteration** - Launch MVP, gather feedback, iterate rapidly

Immediate Next Steps:

1. **Weeks 1-2:** Finalize tech stack, set up infrastructure, create detailed task breakdown
2. **Weeks 2-4:** Design conversational flow + wireframes, build AI prompts
3. **Weeks 4-8:** Develop core MVP (conversation, PRD generation, exports)
4. **Weeks 8-10:** Beta test with 20-30 users, gather feedback

5. **Weeks 10-12:** Final polish, launch on Product Hunt

Success Metrics (Month 1 Post-Launch):

- 500+ signups
- 50+ paid users (\$500 MRR)
- 60%+ free → paid conversion rate (our target)
- 40%+ completion rate on free PRDs
- NPS > 40
